

Slide 1: Title

- **Headline: WiFi Mtaani by NapLink Technologies**
- **Sub-headline:** Fast, Reliable, and Affordable Internet for Underserved Communities
- **Presenter:** DANIEL LODUNGA, Founder & Lead Developer
- **Contact:** Email: daniellodunga@gmail.com

  Phone: +254729084513

  Website: NapLinktechnologies.com

Slide 2: The Hook & Problem

- **Hook:** Millions of residents and small businesses in off-grid and peri-urban towns remain cut off from reliable, high-speed internet due to prohibitive fiber costs and poor broadband infrastructure.
- **The Problem:**
  - High cost of mainstream ISP installations and monthly packages.
  - Unreliable connectivity with frequent downtime in remote areas.
  - Inability of small micro-enterprises to access affordable, flexible daily or hourly data options.

Slide 3: The Solution

- **Headline:** Micro-Wi-Fi Hotspots Powered by Hybrid Solar Infrastructure
- **Overview:** WiFi Mtaani provides high-speed, localized internet access using robust wireless mesh networks and off-grid solar power systems.

- **Key Features:**
    - **Flexible Pricing:** Pay-as-you-go micro-packages (hourly, daily, weekly) starting at minimal transaction thresholds.
    - **Off-Grid Reliability:** Solar-powered backup ensures 24/7 uptime regardless of local power outages.
    - **Seamless Access:** Instant captive portal login with automated M-Pesa payment validation.

Slide 4: Market Opportunity

- **TAM (East Africa Off-Grid & Peri-Urban Internet): $900M+** annually, driven by millions needing flexible, non-contract broadband data in underserved centers.
- **SAM (Kenyan Rural & Peri-Urban Trading Hubs): $2M+ / KES 270M** across 500+ high-density market centers and transport hubs in Kenya.
- **SOM (6-Month Deployment Goal): KES 1.13M / $25K ARR** by scaling from 1 operational proof-of-concept hub to 20 solar-powered nodes serving 2,000+ active micro-subscribers.

Slide 5: Product / How It Works

- **Step 1: Connect:** Users join the "WiFi Mtaani" public network on any mobile device or laptop.
- **Step 2: Select & Pay:** The captive portal prompts the user to select an affordable package and pay via M-Pesa.
- **Step 3: Auto-Authenticate:** The system instantly authenticates payment and grants high-speed internet access without manual operator setup.
- **Behind the Scenes:** MikroTik routing, custom bandwidth management scripts, and low-latency wireless access points.
-

Slide 6: Business Model

- **Single Hub Monthly Revenue:** ~KES 13,500 average.
- **Monthly Operational Costs (OpEx):** ~ KES 5,500
- **Net Profit Per Hub:** KES 8,000
- **Payback Period:** If setting up one solar-powered AP node costs ~ KES 25,000, your single site pays for itself in under **3 to 4 months**.

Slide 7: Traction & Milestones

- **Proven Revenue Traction:** Generated **KES 26,750+** in revenue over the last 60 days from a single community hub, showing a **14% month-over-month growth**.
- **Demonstrated Demand:** Proven customer willingness-to-pay for daily/hourly micro-packages via automated M-Pesa channels. I get an average of +3 new daily active users.
- **Proof of Concept:** Successfully operational with 99.9% uptime powered by an off-grid solar setup and MikroTik network management.

Slide 8: Competitive Edge

- **Local Adaptation:** Built specifically to withstand rural infrastructure challenges (solar backup, weather-proof outdoor APs).

- **Automated Payments:** Frictionless M-Pesa STK push integration allowing instant user onboarding without physical voucher cards.
  Cash wifi vouchers to help clients access internet incase of STK push system failure.

- **Cost Structure:** Low operational overhead using efficient hardware and customized open-source network management software.

Slide 9: Go-To-Market (GTM) Strategy

- **Community Champions:** Partner with local youth, community-based organizations (CBOs), and local traders to drive awareness.

- **Location Targeting:** Deploy access points near high-foot-traffic areas (matatu stages, local markets, shop clusters).

- **Reseller Program:** Enable local agents to re-sell data packages and earn commissions using simple agent portals.

Slide 10: The Team

- **DANIEL LODUNGA — Founder & Network/Software Developer**
    - Expertise in network infrastructure setup (MikroTik, outdoor wireless APs), full-stack software development (Flutter, Web), and off-grid solar deployments.
- **Advisors / Key Partners:** Local community leaders and technical mentors supporting regional rollouts.

Slide 11: Financial Projections & The Ask

The Expansion Formula:

- 1 Node = ~KES 13,500/month
- 10 Nodes = ~KES 135,000/month
- 50 Nodes = ~KES 675,000/month

- **The Ask:** We are seeking KES 500,000 to deploy 12 additional solar-powered hotspot nodes in high-density locations, scaling monthly recurring revenue to over KES 175,500/month within 6 months

- **Use of Funds:**

    - **60%** Hardware & Solar Equipment Acquisition (Routers, APs, Deep-Cycle Batteries).

    - **25%** Network Expansion & Backhaul Capacity.

    - **15%** Local Marketing & Community Onboarding.

Slide 12: Vision & Closing

- Bridging the digital divide, one community at a time.

- **Call to Action:** Join us in powering connected, empowered communities across Kenya

  Thank You!
